## ADDITIONAL DETAILS

### 1. PostalCode

A five-digit code (00000-99999) which identifies a specific geographic delivery area. ZIP also known as “Zone Improvement Plan”. ZIP Codes represent an area within a state or a single building or company with high mail volume. In very rare case, a ZIP Code shares different states boundaries.

### 2. PrimaryRecord

Yes or No (Y/N) flag indicating whether or not this column indicates the "primary" city name within a given zip code, as designated by United States Postal Service.

### 3. City

This is the name of USPS preferred city. It is used at the last line of postal address. The name can represent a city, a postal entity, a community or a municipality name.

### 4. CityAliasName

This may be the name of a city, a postal entity, a community or a city alternate name. There may be more than one alias names for a ZIP Code.

### 5. CityType

This field indicates the type of locale in field CityAliasName. Refer to table for all city types.
